

Перезапуск ПЭВМ в режиме загрузки в оболочку UEFI

[How to install unsigned drivers in Windows 10.](#)

Перезапуск [ПЭВМ](#) в режиме загрузки в оболочку UEFI:

```
shutdown.exe /r /o /f /t 00 # https://dragonserw.ru/windows:uefi
```

- shutdown.exe – It's a Command-Line application which is inclusive with [Windows](#). It does various kinds of restarts and shutdowns;
- /r – means “restart”;
- /o – means “the PC should start in the Option menu”;
- /f – means “restart directly and close all opened programs immediately”;
- /t 00 - shows the time until the restart happens (in seconds). In this case 0 seconds, which equals an immediate restart.
